SUM-IT Computer Systems Ltd.

The most important hallmark for all SUM-IT's programs, is that for all they provide, they are SIMPLE-TO-USE. They have all been written with the User in mind, gaining the maximum output from the minimum input and requiring no previous knowledge of computers to operate them. With any Total Module purchase, receive three months of Gold Level support completely free, this includes support calls on a non-premium landline and weekly online back-ups of your data.

Optional Modules & Equipment

All optional modules include posting to Accounts where relevant. All Total Modules: Beef, Dairy, Field, Sheep, Payroll and Contractor's Diary integrate seamlessly with TOTAL2 Accounts.

Cloud capabilities

TOTAL2 Accounts can be run either locally on one PC or via the Cloud, giving multi-user access login from anywhere at anytime.

Invoicing Module

Generates customer invoices direct from TOTAL2 Standard Accounts. Customised headers and footers can be added to avoid ordering expensive stationery in.

Contractor's Diary Module

A facility to raise quotes, orders, job cards and delivery notes, storing customer records through the complete quote to invoicing process. Invoice runs automatically raise invoices from work done or goods delivered.

Total Payroll Module

Caters for a variety of wage calculation needs within agriculture and other business types. It calculates Tax and National Insurance, prints full payslips, producing all figures required for month and year-end returns as well as Pension payments.

Electronic Invoice Storage Module

Store scanned paper invoices and imported electronic invoices against TOTAL2 Accounts entries for easy data entry and access at anytime.

PC Banking Module

Exports payment details from Total Accounts across to most PC Banking programs to eliminate duplication of entering the details into both programs. Please note this does not generally include free Internet Banking services as they do not have Import facilities.

Deadstock Control Module

Keeps a tally of specific deadstock items as they are bought and sold. A flexible stock-take process ensures you keep everything aligned.

Hardware Requirements

TOTAL2 operates on Windows 10 and newer and Windows Server and will require 1GB of Hard Disk capacity plus an occasional internet connection to receive program updates and communicate with HMRC and BCMS. Hardware should have a minimum of 8GB Ram.
