

Total Dairy

integrated dairy system solutions

SUM-IT

AGRICULTURAL SOFTWARE

Total's parlour interface modules eliminate the day-to-day duplication of data input to multiple parlour systems, heat detection software, feeders and your Total Dairy management software.

Total updates operations across all relevant devices, giving you more time to concentrate on your herd. Update the Total Dairy App whilst out on-farm or the simple data entry screen in Total Dairy, the latest individual cow records are then electronically transferred across to your **parlour** software, **heat detection** software and **feeder** systems.

Milk recordings can be imported from the parlour system directly into Total allowing you to monitor milk performance on a daily basis. This enables new feeding calculations to be generated by Total and fresh feeding regimes to be exported back to the parlour feeders.

Parlours and heat detection software linked to Total Dairy modules:

- Westfalia Dp21
- Dairymaster
- ATL Cowculator
- Fullwood Crystal
- DeLaval DelPro
- DeLaval AIPro
- FabDec
- ABS Breeder Tag
- ABS Ingenuity
- NEDAP Velos/Now
- SCR Heatime
- SenseHub
- Vaccar
- IceRobotics
- CowManager
- Agrinet
- smaXtec
- Tru-Test Active Tag

Working with major parlour manufacturers, Sum-It continues to develop and improve Total Interface Modules to maintain our unrivalled reputation as the **leading integrated agricultural software company** within the industry.

Prices start from as little as

£ 275
