

## Dairy Software Solutions

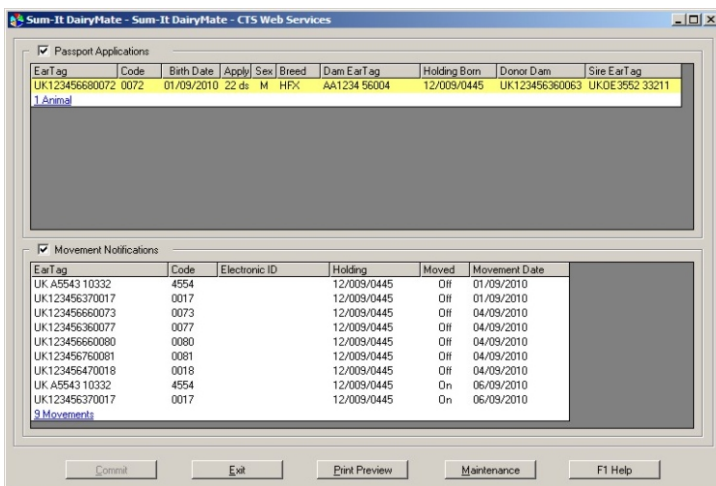

Sum-It Software offer the complete solution for managing your dairy herd records on-farm. Whether you run a small family dairy or a large commercial enterprise, Sum-It have the right software tool for the job.

The first option in the range starts with **DairyMate**, a simple tool to record and view fertility, health and movement events for your cows.

Your initial data can be created for you by us via a BCMS download. Then all you need to do is enter each cow's freezebrand/line number against her eartag.

**DairyMate** is designed to meet legislative recording requirements for movements and health and links directly to BCMS for births/movement notifications.

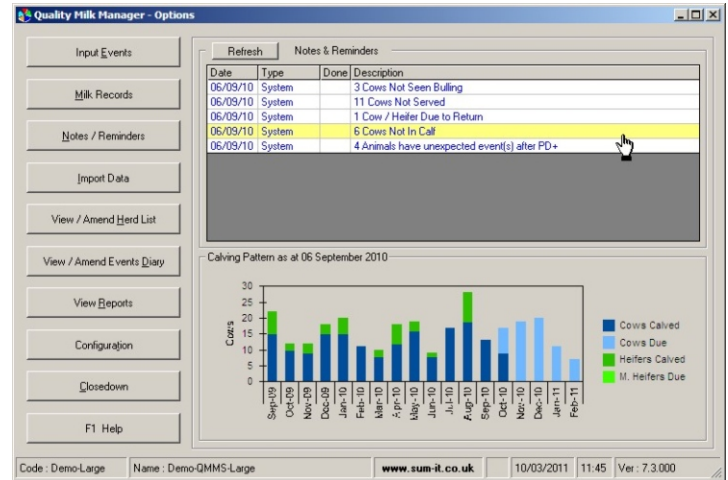

**DairyMate** can be purchased from Sum-It for £345 which includes a BCMS download and 3 months support. Annual support thereafter starts from £55.

The **Total Dairy** module can be purchased from Sum-It for £695 which includes a data build from QMMS/NMR/CIS/BCMS and 3 months support. Annual support thereafter starts from £86.

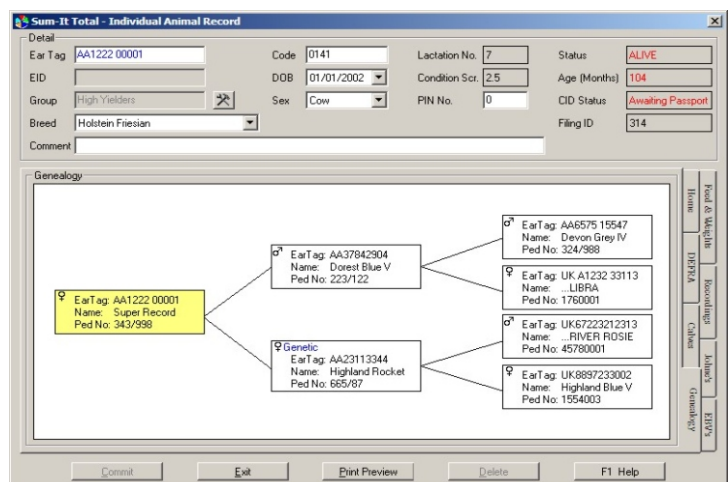

For further information and a full comparison of the features and functionality of both systems please see overleaf.

**Sum-It Sales & Support Line 01844 213003**

And, for those who require advanced herd performance reports with comprehensive individual records including full pedigree details and lactation histories, you can select **Total Dairy** from Sum-It's range of Integrated Software.

**Total Dairy** includes all the features of **DairyMate** and can be linked to many parlours to avoid duplication of data entry. Furthermore, you can bolt on **Total Accounts** to the Dairy module creating a seamless link for 'shared' data such as livestock, semen, medicine and feed purchases, together with livestock sales.
